The abstract of the disclosure is objected to because it has not been presented in the proper domestic form. Correction is required. See MPEP § 608.01(b).

Claims 1-32 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

A conclusion of lack of enablement means that, based on the evidence regarding each of the factors below, the specification, at the time the application was filed, would not have taught one skilled in the art how to make and/or use the full scope of the claimed invention.

(A) The breadth of the claims.

The claims encompass an immense number of specifics having a wide variety of specific structural formulas.

(B) The state of the prior art.

Guanidino substituted aminoglycosides are known in the prior art as disclosed by the U.S. Patent No. 6,525,182.

(C) The level of predictability in the art.

It is well known in the pharmaceutical art that even minor changes in the structural formula of a compound can alter its activity.

(D) The amount of direction provided by the inventor.

The disclosure of guanidine-tobramycin and guanidine-neomycin conjugated to BODIPY or Florescin is clearly not commensurate with the full scope of the claimed invention.

(E) The existence of working examples.

The specification provides examples of guanidine-tobramycin and guanidine-neomycin attached to florescent compounds BODIPY and Florescin. There are no examples of active compounds conjugated to guanidine-tobramycin or guanidine-neomycin set forth in the specification.

(F) The quantity of experimentation needed to make and/or use the invention based in the content of the disclosure.

Because there is no way to predict a priori which specific conjugates will result in an active compound having increase of the cellular intake, it would take an enormous amount of trial and error to test various compounds encompassed by the instant claims.

Claims 1-32 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The structural formula of the claimed compounds is unclear i.e. it is not clear how the compound, a a dialkoxy substance and a guadinylated reagent are attached to each other.

The term “comprise[s]” renders claims 3-4 indefinite since it leaves the structural formula of the claimed compound open-ended.

There is no antecedent basis in claim 1 for the terminology “beneficial compound” in claims 9 and 10.

Claims 14-32 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are: the specific treating and conjugated steps. Note that no reaction steps are set forth in the instant method claims.
